Experience

Software Engineer @ EasyPost

Nov 2021 – Jan 2025

- Architected and led the development of seven EasyPost client libraries, handling millions of API requests per hour to ensure thread safety and feature parity
- Extracted Insurance and Brand APIs from the monolith into new microservices, optimizing the legacy codebase and reducing CI/CD pipeline times by ~75%
- Integrated multiple store connections (Shopify, Amazon, WooCommerce, BigCommerce, eBay) into EasyPost's Nexus product from ShipBlink, enabling users to manage orders across all platforms in one place
- Designed and implemented the EasyPost Insurance Refund API by collaborating with cross-functional teams and integrating it with multiple internal services
- Launched the EasyPost Claims API that allows shippers to automate submitting and managing insurance claims for lost, damaged, or stolen packages
- Contributed to the EasyPost Carrier Metadata API in a new Python microservice, enabling users to fetch service levels and predefined packages for carriers
- Migrated API documentation and guides to a new microservice, reducing development time by ~50% using Markdown for simpler content management
- Reduced thousands of lines of code by creating reusable React components, improving maintainability on the EasyPost website

Application Developer @ Northwest Bank

May 2020 – Nov 2021

- Developed an internal web application using Angular, ASP.NET Web API, and SQL Server, enabling approximately 2,500 employees to share ideas for improving bank operations and driving innovation
- Leveraged Microsoft Form Recognizer to develop an application that extracts text, tables, and signatures from documents, improving workflow efficiency by 60% using .NET Framework, SSIS Packages, C#, and Microsoft SQL Server
- Converted PDF forms to SharePoint List forms with JavaScript and jQuery customization to accelerate the employee reimbursement workflow process
- Developed and maintained the bank's intranet, providing daily support and responding to employee inquiries to address internal business needs
- Transferred internal code repositories from Microsoft Team Foundation Version Control to GitHub, enabling distributed version control across the team members

Software Engineer Intern @ SyncloT Technologies

Jul 2019 – Aug 2019

- Constructed a full-stack web application that allows customers to visualize data from the IoT sensor by using HTML, CSS, JavaScript, ExpressJS, MongoDB, Bootstrap, AWS, and Node.js
- Designed and implemented levels of user privilege features together with the administrator system that manages sub-account users

Web Developer Intern @ Alzerina Jewelry

May 2018 – Aug 2018

- Managed the Alzerina company website content and added/removed products through the Shopify platform
- Created a new website for the Alzerina Fashion with HTML, CSS, and JavaScript

Skills

Programming Languages

Python, Java, PHP, C++, C#, Ruby, Go, JavaScript, SQL
